*Gas flow.

Measurements show that in free dust-air jets, the
velocity of the solid particles is considerably different
than the air velocity, (even with quite small particle
dimensions, of the order of 60 - 70 μ). The relative
velocity of the particles in the jet is greater, the
greater the particle dimension, the greater its density

DESCRIPTORS: *Acoustics, *Sound, Propagation,
Density, Velocity, Pressure, Geometry, Numerical
analysis.

New formulas are derived for flow and density of acoustical energy in geometric approximation, depending only on the potential of acoustical velocity and not containing acoustical pressure.
